

Ledgerline

Autonomous accounts payable for mid-market finance teams.

Series A — Confidential — September 2026

The problem

- Mid-market AP teams (200–2,000 employees) process 3,000–25,000 invoices per month by hand
- Average fully loaded cost per invoice: \$11.40 (company survey of 64 prospects)
- Error rate on manual entry: 3.1%; late-payment penalties average \$41k/year per company

Product

Before: invoice arrives by email → clerk keys it into the ERP → manager approves → payment run.

After: Ledgerline reads the invoice, matches PO and receipt, codes GL lines, routes exceptions, and posts to NetSuite / Dynamics / Sage Intacct.

87% of invoices processed with no human touch (Aug 2026, customers live >90 days).

Traction

Metric	Value
ARR (Aug 2026)	\$3.84M
ARR (Aug 2025)	\$1.21M
Paying customers	92
Net revenue retention (trailing 12m, 41 customers)	118%
Gross logo retention	94%
Gross margin (incl. inference & hosting)	74%
Largest customer	6% of ARR

Customers

Selected customers: Harbor Freightways, Colfax Dental Group, Brightline Senior Living, Arcadia Tile.

12 active paid pilots; 19 of 24 completed pilots converted to annual contracts.

Go-to-market

- Mid-market sales team of 7 AEs; average sales cycle 54 days
- ACV ~\$42k; CAC \$58k (includes AE salaries and commissions, excludes founder time)
- 34% of new ARR from NetSuite partner channel
- Founders involved in ~60% of closed deals in the last two quarters

Market

TAM: \$38B global accounts payable automation.

US mid-market: ~190,000 companies with 100–2,500 employees.

Competition

Bill.com and Tipalti serve SMB and upper mid-market with workflow tools; Stamplicy focuses on approval collaboration. Incumbent ERPs ship basic OCR.

We are the only fully autonomous AP agent for the mid-market.

Financials

Cash: \$3.1M (Aug 2026). Net burn: \$365k / month.

2027 plan: \$10M ARR, 150 customers, burn \$620k / month after the round.

Team

Maya Okafor, CEO — Stanford GSB, ex-McKinsey; 8 years in AP operations at a 1,400-person distributor, led an ERP migration; previously controller.

Daniel Brandt, CTO — Stanford CS, ex-Google; built document-understanding systems at a logistics software company; 2 patents on table extraction.

Team of 38. Backed by Sequoia and a16z scouts.

The round

Raising \$12M Series A, priced equity, \$48M pre-money.

Use of funds: 55% GTM, 30% product (Dynamics and SAP B1 integrations), 15% G&A.

Milestone: \$10M ARR within 18 months.
